

## IMPROVING THE SAFETY OF YOUR PRESSES

We are glad you've taken the time to reach out to improve your safety. PowerSafe is committed to total employee safety focused on engineered solutions through the collaborative team efforts between PowerSafe and you. Below is a quick outline of one of our many custom safety solutions

### GUARDING SOLUTION

Safety guarding designed and built for your machine combining t-slotted extrusions and adjustable rod guards. With this modular design, the inherent flexibility allows for the entry and exit of numerous shapes and sizes of material. Access panels and doors with safety switches can also be added.

### INTEGRATED SAFETY

Light curtains for point of operation or perimeter guarding designed specifically for automatic or manually fed presses. A transmitter and receiver creating a safe zone from the hazard while allowing for floating blanking capabilities if your operation requires it. Control Upgrades available with this solution.

### VERIFICATION - VALIDATION

PowerSafe Automation can test the stop time of your machine and compare the placement of your presence sensing devices, such as light curtains and laser scanners, in relation to the machine hazards.
